

Magnum 6KL Managed Edge Switch

Hardware Installation and User Guide

Magnum™ 6KL Managed Edge Switch

Hardware Installation and User Guide

Part #: 84-00184Z (Rev. F)

Trademarks

GarrettCom is a registered trademark and **Magnum, Dymec, DynaStar, Personal Switch, Link-Loss-Learn, S-Ring, Convenient Switch** and **Converter Switch** are trademarks of GarrettCom, Inc.

Ethernet is a trademark of Xerox Corporation

NEBS is a trademark of Telcordia Technologies

UL is a registered trademark of Underwriters Laboratories

Important: The Magnum 6KL Managed Edge Switch contains no user serviceable parts. Attempted service by unauthorized personnel shall render all warranties null and void. If problems are experienced with Magnum 6KL Switch products, consult Section 6, Troubleshooting.

Federal Communications Commission
Radio Frequency Interference Statement

This equipment generates uses and can radiate frequency energy and if not installed and used properly in strict accordance with the manufacturer's instructions, may cause interference to radio communication. It has been tested and found to comply with the limits for a Class A computing device in accordance with the specifications in Subpart J of Part 15 of FCC rules, which are designed to provide reasonable protection against such interference when operated in a commercial environment. Operation of this equipment in a residential area is likely to cause interference, in which case the user, at their own expense, will be required to take whatever measures may be required to correct the interference.

Canadian Emissions Statement

This Class A digital apparatus meets all requirements of the Canadian Interference-Causing Equipment Regulations.

Cet appareil respecte toutes les exigences du Règlement sur le matériel du Canada. Cet appareil est Classe A.

Electrical Safety requirements:

1. This product is to be installed Only in Restricted Access Areas (Dedicated Equipment Rooms, Electrical Closets, or the like).
2. 48VDC products shall be installed with a readily accessible disconnect device in the building installation supply circuit to the product.
3. This product shall be provided with a maximum 10A DC Listed fuse or circuit breaker in the supply circuit when connected to a 48V centralized source.
4. The external power supply for DC units shall be Listed, Direct Plug In power unit, marked Class 2, or listed ITE Power Supply, marked LPS, which has suitably rated output voltage (i.e. 24VDC or 48VDC) and suitable rated output current.
5. Product does not contain user replaceable fuses. Any internal fuses can ONLY be replaced by GarrettCom personnel through the RMA process.

This equipment has the ordering option of being supplied to the purchaser without a Fiber Optic Class 1 Laser transceiver included. In this case, it is the responsibility of the purchasing party to apply the proper labeling required to the product, in accordance with US 21CFR Subchapter J Part 1040, if a transceiver is installed by the purchaser. (See label example below)

Complies with FDA radiation performance standards, 21CFR Subchapter J.

Revisions:

- Rev. F 05/12:** Added PoE+ module C, removed module install instructions
- Rev. E 11/09:** Updated Copper Gigabit Port LED designations (pg. 31)
- Rev. D 10/09:** Updated Sec. 1.1 (pg. 2) and Sec. 3.2 (pg. 18) to include SC and ST fiber connectors
- Rev. C 10/09:** Added photos to Appendix D
- Rev. B 09/09:** Added additional module options, changed Copper Gb LED configuration, see 5.1.1
- Rev. A 07/09:** Initial Release

1.0 SPECIFICATIONS

1.1 Technical Specifications

Performance

Filtering / Forwarding Rate:

Ethernet (10Mb): 14,880 pps

Fast Ethernet (100Mb): 148,800 pps

Gigabit Ethernet (1000Mb): 1,488,000 pps

Switching Processing Type: Store and Forward with IEEE 802.3x full-duplex flow -control, non-blocking

Data Rate: 10Mbps, 100Mbps and 1000Mbps

Address Table Capacity: 8K node, self-learning with address aging

Packet buffer size: 128 KB total

Latency: 6 μ s + packet time max. (TX-TX, TX-FX, FX-FX, TX-G, G-G)

Throughput with 8 10/100 and 2Glink max.- 4.17M pps (Transmit)

Back plane- 2.66Gb/s per slot

Network Standards and Compliance, hardware

Ethernet V1.0/V2.0 IEEE 802.3: 10BASE-T,

IEEE 802.3u: 100Base-TX, 100BASE-FX

IEEE 802.3z: 1000BASE-X Ethernet (Auto-negotiation)

IEEE 802.3ab: 1000BASE-X Ethernet

IEEE 802.1p: Priority protocol

IEEE 802.1d: Spanning tree protocol

IEEE 802.1w: Rapid Spanning tree protocol

IEEE 802.1q: VLAN Tagging

IEEE 802.3x: Flow Control

IEEE 802.3ad: Link Aggregation (Trunking)

IEEE 802.1x: Port based Network access control

IEEE 802.3af: Power over Ethernet

IEEE 802.3at: Power over Ethernet (PoE+)

Maximum 10 Mbps Ethernet Segment Lengths

Unshielded twisted pair	- 100 m (328 ft)
Shielded twisted pair	- 150 m (492 ft)
10BASE-FL multi-mode fiber optic	- 2 km (6,562 ft)
10BASE-FL single-mode fiber optic	- 10 km (32,810 ft)

Maximum Standard Fast Ethernet Segment Lengths:

10BASE-T (CAT 3, 4, 5 UTP)	- 100 m (328 ft)
100BASE-TX (CAT 5 UTP)	- 100 m (328 ft)
Shielded twisted pair	- 150 m (492 ft)
100BASE-FX, half-duplex, multi-mode	- 412 m (1350 ft)
100BASE-FX, full-duplex, multi-mode	- 2.0 km (6,562 ft)
100BASE-FX, half-duplex, single-mode	- 412 m (1350 ft)
100BASE-FX, full-duplex, single-mode	- 20.0 km (66K ft)
100BASE-FX, full-duplex, Long Reach	- 40.0 km (122K ft)

Maximum Standard Gigabit Ethernet Segment Lengths:

1000BASE-T (CAT5e or higher is recommended)	- 100m (328 ft)
1000BASE-SX, full-duplex, multi-mode (62.5 μ m cable)	- 220m

1000BASE-SX, full-duplex, multi-mode (50µm cable) - 550m
1000BASE-LX, full-duplex, multi-mode (50, 62.5µm cable) - 550m
1000BASE-LX, full-duplex, single-mode (9µm cable) - 5km
1000BASE-ZX, full duplex, single-mode (9µm cable) - >70km

Fiber Multi-mode connector types supported:

Fiber Port, MTRJ-type (plug-in): SFF Fiber multi-mode 100BASE-FX
Fiber Port, LC-type (plug-in): SFF Fiber multi-mode 100BASE-FX
Fiber Port, SC-type (plug-in), multi-mode 100BASE-FX
Fiber Port, ST-type (twist-lock), multi-mode 100BASE-FX
Fiber Port, 1000BASE-SX, SFP modules

Fiber Single-mode connector types:

Fiber Port, LC-type, Fiber SFF single-mode, 100BASE-FX
Fiber Port, SC-type, single-mode, 100BASE-FX
Fiber Port, 1000BASE-LX, SFP modules

LEDs: Per Port (one set at the port)

(see section 5.1.1 for detailed LED configurations)

Operating Environment

Ambient Temperature:

-40° to 140° F (-40° to 60°C) for UL60950 and Component Parts rating
-40° to 195° F (-40° to 85°C) for IEC 60068 Type Test short term rating

Storage Temperature: -60° to 210°F (-50° to 100°C)

Ambient Relative Humidity: 5% to 95% (non-condensing)

Altitude: -200 to 13,000 ft. (-60 to 4000m)

Conformal Coating (humidity protection) optional: Request quote

Alarm Relay Contacts

One NC indicating internal power, one NC software controllable

Packaging

Enclosure: High strength Cold rolled steel

Dimensions: 8.0 in H x 1.75 in W x 6.0 in D (in vertical mounting position)
20.3 cm H x 4.4 cm W x 15.2 cm D

Cooling method: Convection, fully-enclosed steel case used as a heat sink,
designed for vertical mounting, no fans

Weight: 2.1 lbs. (0.95 kg)

DC Power Supply (Internal, floating ground)

DC Power Connector: Terminal block

12VDC Power Input nominal (range 10 to 15VDC)

24VDC Power Input nominal (range 18 to 36VDC)

-48VDC Power Input nominal (range 36 to 60VDC)

Power Input for PoE:

PoE 802.3af: -48VDC Power Input (range 45 to 57VDC)

add up to 15 watts per PoE port to the base unit power draw

Power Input for PoE+:

PoE 802.3at: -48VDC Power Input (range 52 to 56VDC)

add up to 25 watts per PoE+ port to the base unit power draw

DC Power Supply (Internal, floating ground)

125VDC Power Input nominal (range 88 to 150VDC)
250VDC Power Input nominal (range 160 to 300VDC)
Std. Terminal Block : “ -, GND, + ”

AC Power Supply (Internal)

AC Power Connector: IEC-320 type, male recessed
100-240VAC Power Input, 47 to 63 Hz (auto-ranging)

Power Consumption:

15 watts Max. (for a fully loaded fiber model with 2Gb)
10 watts Max. (for 8 port copper and 100Mb fiber model)

Dual DC Power Input (Optional)

A Dual-Source option is available for the 12VDC, 24VDC, -48VDC, and 125VDC and 250VDC models. This provides for continuity of operation when either of the DC input sources is interrupted. See Appendices B and C.

The Dual-Source Terminal Block is marked: “ +A, -A, -B, +B ”

Management Console connector

RJ45, see details at sec. 3.6

6KL Mounting:

Vertical mounting normal. Suitable for wall or DIN-Rail mounting

Agency Approvals and Standards Compliance:

UL listed (UL60950), cUL, CE, Emissions meet FCC Part 15 Class A
NEBS Level 3 and ETSI Compliant
IEEE 1613 Class 2 Environmental Standard for Electric Power Substations
See also **Note for Power Substations** in Section 3.2.1, 3.6.1, and 5.1.2
IEC 61850 EMC and Operating Conditions Class C for Power Substations
NEMA TS-2 and TEES for DC-powered and PoE-powered traffic control equipment

Warranty: Three years, per UL 60950 temperature rating Made in USA

Email info@GarrettCom.com for additional information.

1.2 Ordering Information

<u>MODEL</u>	<u>DESCRIPTION</u>
Magnum 6KL-24VDC:	Magnum 6KL Managed Edge Switch, base unit with four 10/100 copper ports. Up to 4 100Mb fiber ports or up to four more 10/100 copper ports (or combinations) may also be configured, and up to two Gb ports are optional. Heavy duty metal case, IP52 for environmental protection, no fans.
For licensed managed networks software (MNS-6K, RS-Ring and S-Ring) including GUIs for ease-of-use and industry-leading security features, see separate data sheets.	
Magnum 6KL-12VDC:	Same as 6KL-24VDC except the power input is 12VDC
Magnum 6KL-48VDC:	Same as 6KL-24VDC except the power input is -48VDC
Magnum 6KLP-48VDC:	PoE, same as 6KL-48VDC except the four 10/100 ports are PoE (802.3af) enabled, data pairs
Magnum 6KL-125VDC:	Same as 6KL-24VDC except the power input is 125VDC
Magnum 6KL-250VDC:	Same as 6KL-24VDC except the power input is 250VDC
Magnum 6KL-AC:	Same as 6KL-24VDC except the power input is AC 100 to 240VAC, 47 to 63 Hz

Please use this URL: for the complete Configuration Guide for the Magnum 6KL.
http://www.garrettcom.com/techsupport/insertion_guides/6KLcg.pdf

Configuration Options: (see following pages)

Each Magnum 6KL base unit may be configured with a choice of 1 modular slot (Slot C) and fixed Gigabit ports (Slot B) in addition to the fixed RJ45 ports in Slot A.

Following modules can be configured in Slot C only**Magnum 6KL (Slot C) Port Modules:**

6KL4-RJ45	adds four 10/100 copper ports
P6KL4-RJ45	adds four PoE 10/100 copper ports requires 6KLP-48VDC base unit
PP6KL4-RJ45	adds four PoE+ 10/100 copper ports
6KL4-4MLC	adds four MM 2Km 100Mb LC fiber ports
6KL4-2MLC2RJ	adds two MM 2Km 100Mb LC fiber and two 10/100 copper ports
6KL4-4SLC	adds four SM 20Km 100Mb LC fiber ports
6KL4-2SLC2RJ	adds two SM 20Km 100Mb LC fiber and two 10/100 copper ports
6KL4-4SLCL	adds four SM 40Km 100Mb LC fiber ports
6KL4-2SLCL2RJ	adds two SM 40Km 100Mb LC fiber and two 10/100 copper ports
6KL4-4MTRJ	adds four MM 2Km 100Mb MTRJ fiber ports
6KL4-2MT2RJ	adds two MM 2Km 100Mb MTRJ fiber and two 10/100 copper ports
6KL4-4MSC	adds four MM 2Km 100Mb SC fiber ports
6KL4-2MSC2RJ	adds two MM 2Km 100Mb SC fiber and two 10/100 copper ports
6KL4-4SSC	adds four SM 20Km 100Mb SC fiber ports
6KL4-2SSC2RJ	adds two SM 20Km 100Mb SC fiber and two 10/100 copper ports
6KL4-4SSCL	adds four SM 40Km 100Mb SC fiber ports
6KL4-4MST	adds four MM 2Km 100Mb ST fiber ports
6KL4-2MST2RJ	adds two MM 2Km 100Mb ST fiber and two 10/100 copper ports
6KL4-4FLST	adds four MM 2Km 10Mb ST fiber ports
6KL4-2FX2FLMST	adds two MM 2Km 100Mb and two MM 2Km 10Mb ST fiber ports
6KL4-2SL2MLC	adds two SM 20Km 100Mb LC fiber and two MM 2Km 100Mb LC fiber ports
6KL4-1SL3MLC	adds one SM 20Km 100Mb LC fiber and three MM 2Km 100Mb LC fiber ports
6KL4-1ML1SLC2RJ	adds one MM 2 Km 100Mb LC fiber, one SM 20Km 100Mb LC fiber and two 10/100 copper ports
6KL4-1MLC3RJ	adds one MM 2Km 100Mb LC fiber and three 10/100 copper ports
6KL4-1SLC3RJ	adds one SM 20Km 100Mb LC fiber and three 10/100 copper ports
6KL4-1SLCL3RJ	adds one SM 40Km 100Mb LC fiber and three 10/100 copper ports
6KL4-1MT3RJ	adds one MM 2Km 100Mb MTRJ fiber and three 10/100 copper ports
6KL1-1MLC	adds one MM 2Km 100Mb LC fiber port
6KL1-1SLC	adds one SM 20Km 100Mb LC fiber port
6KL1-1SLCL	adds one SM 40Km 100Mb LC fiber port
6KL1-1MT	adds one MM 2Km 100Mb MTRJ fiber port

MM= Multi-mode fiber

SM= Single-mode fiber

Following modules can be configured in Slot B only**Magnum 6KL (Slot B) Gigabit Port Modules:**

- 6KL-2GCU** adds two auto-negotiating 10/100/1000Mb copper ports
- 6KL-2GSFP** adds two SFP pluggable open transceiver ports for user selectable SFP Gb transceivers in each

Gigabit (1000Mb) SFP (Small Form Pluggable) Transceiver option (6KL)

- SFP-GTP** Gb SFP transceiver, Copper 1000Base-T, 100m
- SFP-SX** Gb SFP transceiver, 1000Mb-SX, 850nm wavelength, 550m
- SFP-ESX** Gb SFP transceiver, 1000Mb, 1310nm wavelength, 2Km
- SFP-LX10** Gb SFP transceiver, 1000Mb-LX, 1310nm wavelength, 10Km
- SFP-LX25** Gb SFP transceiver, 1000Mb-LX, 1310nm wavelength, 25Km
- SFP-ZX40** Gb SFP transceiver, 1000Mb-ZX, 1550nm wavelength, 40Km
- SFP-ZX70** Gb SFP transceiver, 1000Mb-ZX, 1550nm wavelength, 70Km

**MNS-6K License- MNS-6K managed software is pre-loaded from the factory.**

S-RING-Key: S-Ring and RS-Ring Redundancy Manager licensed software for redundant ring management. One S-Ring or RS-Ring key is for licensed use one 6K-managed self healing Ring.

CONSOLE-CBLQD: Console attachment cable. Serial null modem (aka X-modem) cable with RJ45 connector for the 6KL on one end and a DB-9 connector on other end.

CONSOLE-CBLQU: Same as above, but with USB connector

DIN-RAIL-6KL: Din-Rail mount for a secure vertical mount, with screws for 6KL

DUAL-SRC: Two separate power inputs (12/24/48, 125 or 250VDC)

CONFORM05-CRM: Conformal coating, heavy duty silicone at 5 mil thickness, for interior PCBs, PS and modules (for moisture protection)

CONFORM08-CRM: Conformal coating, heavy duty silicone at 8 mil thickness, for interior PCBs, PS and modules (for oil and gas industry)

2.0 INTRODUCTION

2.1 Inspecting the Package and Product

Examine the shipping container for obvious damage prior to installing this product; notify the carrier of any damage that you believe occurred during shipment or delivery. Inspect the contents of this package for any signs of damage and ensure that the items listed below are included.

This package should contain:

- 1 Magnum 6KL Managed Edge Switch, base unit
(configured with user-selected port module options installed)
- 2 Set of two metal vertical mounting brackets, with screws to the case
- 1 6KL Installation and User Guide (this manual)

Remove the items from the shipping container. Be sure to keep the shipping container should you need to re-ship the unit at a later date.

In the event there are items missing or damaged, contact the party from whom you purchased the product. If the unit needs to be returned, please use the original shipping container if possible. Refer to Section 6, Troubleshooting, for specific return procedures.

2.2 Product Description - Magnum 6KL Managed Edge Switch

Magnum 6KL Managed Edge Switches provide configurability in an entry-level industrial-grade package. The high performance 6KL base unit comes with four 10/100 copper ports (which may be either regular or PoE). Up to 4 100Mb fiber ports or up to four more 10/100 copper ports or combinations, may also be configured. In addition, one or two Gb ports may be configured as 10/100/1000 copper or SFP fiber in any 6KL base unit.

Magnum 6KL comes with the best-of-breed MNS-6K managed networks software. (MNS-6K-SECURE optional) See the Managed Networks Software (MNS-6K) datasheet for more information at

<http://www.garrettcom.com/techsupport/software/datasheets/mns6kds.pdf>

Magnum 6KLs are ideal for building a switched, hardened Ethernet network infrastructure, connecting edge devices such as PLCs and IEDs with upstream switches or routers. Designed for use in industrial applications such as factory floors and control cabinets, industrial video surveillance systems with PoE, power utility substations, tariffed carrier field facilities, or transportation and oil and gas, the rugged Magnum 6KL handles stressful workloads (mixes of bursty data traffic and priority streaming traffic) as well as harsh environmental conditions.

The 6KL metal case serves as a heat sink and a sealed-case design enables the unit to operate in harsh Industrial grade environments and achieves high EMI noise immunity. Heavy duty Ethernet Switch jobs are readily accommodated with an extended temperature rating of -40°C to 60°C by the UL Component Parts method, or -40°C to 85°C by the IEC 60068 Type-Test method. With options such as several popular DC power input types, AC power and DIN-Rail mounting, the hardened Magnum 6KL is a “multi-purpose” Industrial Ethernet Switch.

The 6KL managed switches also provides a PoE option via power –inside PoE base unit (6KLP-48VDC) on Slot A and allows the users to utilize up to 4-ports of PoE to support 802.3af Powered devices. See details for PoE base unit in sec 5.1.11. The Power Sourcing Equipment (PSE) is fully compatible with Powered Devices (PD)(e.g wireless access points, IP phones) that comply with the IEEE 802.3af PoE standard. The PoE switch ports have an auto-sensing algorithm, so that they provide power only to 802.3af, PoE end devices. PoE is managed by a multi-stage handshake to protect equipment from damage and to manage power budgets .The PoE ports will discontinue supplying power when the PoE powered devices are disconnected. This feature supports the 802.3af PoE PSE standard for over-current protection, under-current detection, and fault protection.

High performance features include non-blocking unicast traffic speed on all ports and 802.1p QoS Traffic Prioritization. Magnum 6KL switches are “plug-and-play” and are designed for use in connecting edge devices such as PLCs, IEDs and PoE video cameras with upstream switches and routers where a mix of bursty data traffic and priority streaming traffic for video surveillance and cell-tower applications are present.

Magnum 6KL Managed Edge Switches have heavy-duty steel cases and are readily available with standard Industrial grade 24VDC power. Alternative internal DC power options are available. Internal AC power and DC power input types may be 12V, 24V, 48V, 125V, 250V and dual source DC input is optional on the 6KL.

Alarm Relay contacts provided on each Magnum 6KL Switch monitor the hardware and software through traps, providing a record of any losses of power signals and other user- defined software events. See Section 3.5 for details.

2.2.1 Packet Prioritization, 802.1p QOS

Quality of Service means providing consistent predictable data delivery to users from datagram paths that go all across a network. As a LAN device, the Magnum 6KL can do its part to prevent any QOS degradation while it is handling Ethernet traffic through its ports and buffers.

The Magnum 6KL switching hardware supports the IEEE 802.1p standard and fulfills its role in support of QOS, giving packet processing priority to priority tagged packets according to the 802.1p standard. In addition to hardware support for QOS, the MNS software (R2) supports two priority queues that can be shared across the eight levels of defined packet priorities for application-specific priority control by the user through software configuration settings.

2.2.2 Frame Buffering and Flow Control

Magnum 6KL's are store-and-forward switches. Each frame (or packet) is loaded into the Switch's memory and inspected before forwarding can occur. This technique ensures that all forwarded frames are of a valid length and have the correct CRC, i.e., are good packets. This eliminates the propagation of bad packets, enabling all of the available bandwidth to be used for valid information.

While other switching technologies (such as "cut-through" or "express") impose minimal frame latency, they will also permit bad frames to propagate out to the Ethernet segments connected. The "cut-through" technique permits collision fragment frames (which are a result of late collisions) to be forwarded which add to the network traffic. Since there is no way to filter frames with a bad CRC (the entire frame must be present in order for CRC to be calculated), the result of indiscriminate cut-through forwarding is greater traffic congestion, especially at peak activity. Since collisions and bad packets are more likely when traffic is heavy, the result of store-and-forward operation is that more bandwidth is available for good packets when the traffic load is greatest.

When the Magnum 6KL Switch detects that its free buffer queue space is low, the Switch sends industry standard (full-duplex only) PAUSE packets out to the devices sending it packets to cause "flow control". This tells the sending devices to temporarily stop sending traffic, which allows the traffic to catch-up without dropping packets. Then, normal packet buffering and processing resumes. This flow-control sequence occurs in a small fraction of a second and is transparent to an observer.

Another feature implemented in the Magnum 6KL Switches is a collision-based flow-control mechanism (when operating at half-duplex only). When the Switch detects that its free buffer queue space is low, the Switch prevents more frames from entering by forcing a collision signal on all receiving half-duplex ports in order to stop incoming traffic.

2.3 Managed Network Software for Magnum 6KL

Magnum 6KL comes with licensed MNS-6K software or MNS-6K-SECURE, which allow the user to configure the Magnum 6KL as a Managed Switch and implements security features and other software enabled features.

(NOTE: Magnum 6KL managed switch will work with MNS-6K Rel v4.1.6 firmware or higher version only, or MNS-6K-SECURE v14.1.6 firmware or higher version only. Using any earlier MNS-6K versions will not support the 6KL hardware)

For PoE+ (PP6KL4-RJ45) supported software release, visit Garrettcom's web site at: http://www.garrettcom.com/techsupport/sw_downloads_6k_new.htm

For additional information about MNS-6K, see the Magnum MNS-6K **Software User guide** in pdf format, a separate document normally accessible via your web-browser, at <ftp://ftp.garrettcom.com/>

or FTP client program at <ftp.GarrettCom.com> using

user : m6kuser

password : m6kuser

All MNS-6K software information, and the documentation related to MNS-6K and MNS-6K-SECURE software, can be accessed at GarrettCom's FTP site.

Alternatively, for the latest documentation and information, or needed GarrettCom's MIBs for SNMP, visit www.GarrettCom.com/techsupport/index.htm#software and look for the Magnum MNS-6K info.

For interactive training software which shows basic and advanced info about the Magnum MNS-6K management software and for a useful tool for first time users, visit [Magnum MNS-6K Operator Training](#).

You may also email: info@GarrettCom.com for further information.

2.4 Features and Benefits

- **Managed switching for high performance Ethernet LANs**

Magnum 6KL Switches provide unicast non-blocking (all ports can run at full speed at once) performance with standard Managed Network Software. They are typically used in LAN traffic centers with up to 8 100Mb +2 Gigabit ports for backbone connections, where managed network services are desired.
- **Switching services includes 802.1p QoS packet prioritization**

The Magnum 6KL switching hardware supports QoS, giving packet processing priority to priority tagged packets according to the IEEE 802.1p standard. For port- and application-specific priorities of data, the QoS software may be configured.
- **Fiber Ports Built-In**

Magnum 6KL Managed Edge Switches are designed to naturally include fiber ports, and support mixes of multi-mode, single-mode, 100Mb and 1000Mb speed; full- and half-duplex; classic Small Form Factor (SFF) and Small Form Pluggable (SFP) fiber connectors. RJ-45 10/100 ports can also be configured in the mix of port types.
- **Relay Contacts for monitoring internal power and user-defined software events**

Two Alarm Relay contacts monitor basic operations. One is for hardware, and will signal loss of power internally. The other is software controlled and will signal user-defined software events such as a security violation or an S-Ring fault condition.
- **Vertical mounting for efficient convection cooling, no fans, extended temperature**

Mounting brackets for vertical mounting are included. DIN-Rail mounting hardware is optional.
- **All types of power input, 12, 24, 48, 125, 250VDC and AC**

The 6KL can be configured with the user's choice of DC power supplies: 12V and 24V for factory floor, 48V for tariffed carrier field facilities and for PoE-powered applications such as IP video surveillance, and 125V or 250V for substations. An internal AC power supply may also be chosen, universal AC for use worldwide.
- **Heavy-duty design for Industrial Ethernet and extended temperature operation**

Fiber ports take more power than copper ports, but the Magnum 6KL design provides for this with heavy-duty components. The ambient temperature dual-rating is 60°C per UL methods, and 85°C per IEC type test methods.
- **MNS-6K licensed Management Software**

Managed Networks Software (MNS) basic version, combined with a Magnum 6K-Series Switch, provides power and efficiency in a managed Ethernet platform. A full range of industry-standard software functions in the MNS-6K software product enables the versatile Magnum 6K Switches to perform efficiently in a wide range of managed LAN applications, including redundant topologies.
- **MNS-6K-SECURE (optional, for extra security)**

Magnum MNS-6K-SECURE software is designed for those customers demanding extra security in their networks. MNS-6K-SECURE is an optional item--licensed per switch. All of the features in regular MNS-6K are included, plus extra security.

- **S-Ring and Link Loss Learn for economical high availability using ring topology**
S-Ring combined with the Link-Loss-Learn feature provides reliable fast recovery of a fault in an economical ring topology combining unmanaged and managed switches.
- **RSTP-2004 for rings and meshes, fastest fault recovery, interoperability**
RSTP-2004 provides reliable fast recovery from a fault in a redundant LAN, which may include Magnum switches and routers as well as other vendor's industry-standard-RSTP products. Redundant topologies may include rings, dual-rings, and complex meshes.

2.5 Applications

Magnum 6KL Edge Switches offer high performance, modularity and availability. They provide the flexibility of 100Mbps fiber and copper ports as well as single or dual Gigabit (1000Mb) ports, with industry-standard LAN management software. Magnum 6KL Switches are easily used in a variety of applications including client/server computing, secure VLAN- performance upgrades to departmental networks, and stream traffic for VOIP and audio/video applications. They can also be used in a much diversified combination of mixed media in Industrial floor applications. The performance characteristics of the 6KL Switches enable them to inter-connect a series of subnets (one subnet per 6KL Switch port) in a LAN traffic center. The subnet connections may be via fiber or twisted pair cabling, 100Mbps or 10 Mbps speed, and full-or half-duplex.

The mixed-media modular capability is ideal for industrial applications where existing Ethernet LAN network cabling must be accommodated. The fiber-built-in media capability is ideal for integrating future-proof fiber cabling into the LAN structure.

Example 1: Magnum 6KL Switch for an Industrial Application

Equipped with lots of useful features including hardened enclosures, a wide spread of DC power supply options, and extended temperature ratings qualifies the Magnum 6KL Managed switch for any Industrial factory-floor, traffic control, transportation system, or power utility application. The several MNS-6K software operated features qualifies this managed switch to operate and perform securely and reliably in all critical applications. The addition of *S-Ring* and the *Link-Loss-Learn* software features allow this Managed switch to provide a very secure highly available redundant network capability in any ring topology network.

The Managed 6KL's modularity along with the MNS-6K management software features remarkably handle industrial environments (i.e. where the factory floors are networked with Ethernet based mixed-media LANs equipped with PLCs, computers for taking readings and data from Machines, Client/ Server databases, etc. and sending these important data to the central office data warehouses) very securely and reliably. The DIN-Rail Mounting options on the Magnum 6KL allow the factory floor's industrial user to mount the 6KL securely anywhere on their Network setup.

The option of setting the ports at 10 or 100Mb on copper and 100Mb on fiber media provide widespread options to the users to mix and match their legacy and advance network needs. The modularity of the 6KL Managed Edge Switches make them an attractive choice for use in applications with LAN connections to an organization's multiple site offices and factory- floors. The different locations can be easily connected together with the Fiber ports supported by the Magnum 6KL Switch. A main NT-server in a secure area protected from earthquake or fire hazards can be connected to the full duplex Gigabit Fiber port.

Fig 2.5a The industrial factory floor application with Magnum 6KL

Extended temperature ratings and a variety of options for AC/DC power supplies qualify this managed 6KL switch for use in non-temperature controlled networks and many other temperature sensitive critical Industrial applications where above normal room temperatures occur while the network is in operation. Full-duplex future proof fiber media can easily connect long distance subnets and provide a stable secure network to all applications. The SNMP management capability of the Magnum 6KL Switch helps create a database of all the network subnets to easily manage the network.

Example 2: A managed network is needed to provide a redundant ring topology for maximum redundancy. In a network where any faulty cable, cable disconnection or power failure can bring the whole thing down, a ring switch can be reconfigured and up and running in milliseconds. The ring topology of the network consists of high speed LAN segments supported by 100Mbps full-duplex future-proof fiber media to provide a secure long distance LAN connection. The entire network is sharing a higher bandwidth Gigabit-enabled data-mining server for the vital database located in a separate secured building. The copper ports are required for multiple subnets inside the power plant to check the status of other Ethernet units. The entire spread network will be manageable to provide easy, detectable, uninterrupted support through a viewable SNMP monitor.

Fig 2.5b Magnum 6KL equipped with S-Ring in redundant ring solution

The Magnum 6KL Managed Edge Switch equipped with a mix of copper and fiber ports provides an economical and seamless solution to many requirements. The user-configurable Magnum 6KL provides an extra boost to the network requirements by

providing copper/fiber media along with the higher bandwidth support of 10/100 and 1000Mb. The user can utilize the SNMP feature equipped with VLAN, RMON, STP and other standard managed LAN features to provide a secure and stable network.

The 6KL Managed Fiber with S-ring and Link-Loss-Learn features easily fulfill the redundant requirement with a secure and fast reconfiguration time for cable breakup when set up in a ring topology. The Gigabit port option boosts the bandwidth for high speed to support the peak traffic and minimize congestion.

Example 3: In another application in an industrial environment, a 12 port Nebs compliant, 24VDC managed switch is required to meet the fiber and copper connections to cover the wider area of video CCTV. The switch must be SNMP enabled and managed to easily monitor the whole setup.

The Magnum managed edge switch easily qualifies for this requirement with the various features and modularity it has. Loaded with MNS-6K management software, the edge switch provides a very effective and economical solution for the video -vignette environment.

The security features (e.g. port-security, VLANs, SNMPv3, secure telnet, etc.) also boost the Magnum managed switches to provide a very effective and reliable solution. The modularity feature to support both copper and fiber at either 10/100/1000Mb speeds easily meets the various speeds of legacy and future broadband requirements.

In a fast growing secure video environment, the 6KL is a reliable and secure solution. The modular design of the Magnum 6KL, provides a wide range of copper/fiber options to meet requirements. The Gigabit uplink for storage or broadband uplink allows the telecom user a very effective solution to store their sensitive data securely.

Fig 2.5c Magnum 6KL deployed in a video security CCTV application for monitoring and securing the premises

3.0 INSTALLATION

Before installing the equipment, it is necessary to take the following precautions:

- 1.) If the equipment is mounted in an enclosed or multiple rack assembly, the steady-state long-term environmental temperature around the equipment must be less than or equal to 60°C.
- 2.) If the equipment is mounted in an enclosed or multiple rack assembly, adequate airflow must be maintained for proper and safe operation.
- 3.) If the equipment is mounted in an enclosed or multiple rack system, placement of the equipment must not overload or load unevenly the rack system.
- 4.) If the equipment is mounted in an enclosed or multiple rack assembly, verify the equipment's power requirements to prevent overloading of the building/s electrical circuits.
- 5.) If the equipment is mounted in an enclosed or multiple rack assembly verify that the equipment has a reliable and uncompromised earthing path.

This section describes installation of the Magnum 6KL Switches, as well as connection of the various Ethernet media types.

3.1 Locating Magnum 6KL Switches

For vertical DIN-Rail mounting, see Section 3.3

For vertical panel mounting and wall mounting, see Section 3.3.1

For DC power input data, see Appendix B. For Dual Source, see Appendix C

The rugged metal case of the Magnum 6KL will normally protect it from accidental damage in a lab or workplace setting. Maintain an open view of the front to visually monitor the status LEDs. Keep an open area around the unit so that cooling can occur from convection while the unit is in operation. The 6KL has no fans, so it is silent when in operation. Internal electronics use the case as a heat sink, so the unit may normally be quite warm to the touch.

3.2 Connecting Ethernet Media

The Magnum 6KL Switches are specifically designed to support standard Ethernet media types within a single Switch unit. This is accomplished by using four popular Fiber Connectors which can be individually selected and configured. (See Section 5.1 for a description of the Modules)

The various media types supported along with the corresponding IEEE 802.3, 802.3D, 802.3u, 802.3AB and 802.3z standards and connector types are as follows:

<u>Media</u>	<u>IEEE Standard</u>	<u>Connector</u>
Twisted Pair (CAT 3 or 5)	10BASE-T	RJ-45
Twisted Pair (CAT 5)	100BASE-TX	RJ-45
Twisted pair (CAT5E or CAT6)	1000BASE-T	RJ-45
Fiber (Multi-mode)	10BASE-FL	ST
Fiber (Multi-mode)	100BASE-FX	MTRJ, LC, SC, ST
Fiber (Single-mode)	100BASE-FX	LC, SC
Fiber (Multi-mode)	1000BASE-SX	LC (SFP)
Fiber (Multi-mode, Single-mode)	1000BASE-LX	LC (SFP)
Fiber (Single-mode)	1000BASE-ZX	LC (SFP)

See http://www.garrettcom.com/techsupport/power_budget.pdf for Power budget calculations, to find fiber cable distance information.

3.2.1 Connecting Twisted Pair (CAT3, CAT5, UTP or STP)

The RJ-45 ports of the Magnum 6KL can be connected to the following two media types: 100BASE-TX and 10BASE-T. CAT 5 cables should be used when making 100BASE-TX connections. When the ports are used as 10BASE-T ports, CAT 3 may be used. In either case, the maximum distance for unshielded twisted pair cabling is 100 meters (328 ft).

NOTE : *It is recommended that high quality CAT. 5 cable be used whenever possible in order to provide flexibility in a mixed-speed network, since 10/100 copper switched ports are auto-sensing for either 10 and 100Mb/s.*

The following procedure describes how to connect a 10BASE-T or 100BASE-TX twisted pair segment to the RJ-45 port. The procedure is the same for both unshielded and shielded twisted pair cables.

1. Using standard twisted pair media, insert either end of the cable with an RJ-45 plug into the RJ-45 connector of the port. Note that, even though the connector is shielded, either unshielded or shielded cables and wiring may be used.
2. Connect the other end of the cable to the corresponding device
3. Use the LINK LED to ensure proper connectivity by noting that the LED will be illuminated when the unit is powered and proper connection is established.

NOTE: for Power Substations: In support of the IEEE 1613 Class 2 standard, GCI advises that, for substation applications, the RJ-45 ports are intended for connectivity to other communication equipment such as routers or telecommunication multiplexers installed in close proximity (i.e., less than 2 meters or 6.5ft) to the 6KL. It is not recommended to use these ports in substation applications to interface to field devices across distances which could produce high (greater than 2500V) levels of ground potential rise (GPR) during line-to-ground fault conditions. The 6KL passes the 1613 specifications for zero packet loss with fiber ports & with RJ-45 ports used as indicated here.

3.2.2 Connecting Twisted Pair (CAT5e or better, UTP or STP)

The RJ-45 Gigabit ports of the Magnum 6KL can be connected to the media types, 1000BASE-T or CAT 5E or better 100-ohm UTP or shielded twisted pair (STP) balanced cable. The CAT 5E or better 100-ohm UTP or shielded twisted pair (STP) balanced cable is recommended to use when making 1000BASE-TX connections. In either case, the max distance for unshielded twisted pair cabling is 100 meters (328 ft).

The following procedure describes how to connect a 1000BASE-T twisted pair segment to the RJ-45 port. The procedure is the same for both unshielded and shielded twisted pair cables.

1. 1000BASE-T connections require that all four pairs or wires be connected. Insert either end of the cable with an RJ-45 plug into the RJ-45 connector of the port. Note that, even though the connector is shielded, either unshielded or shielded cables and wiring may be used.
2. Connect the other end of the cable to the corresponding device
3. Use the LINK LED to ensure proper connectivity by noting that the LED will be illuminated when the unit is powered and proper connection is established

3.2.3 Connecting Single-Mode Fiber Optic

When using single-mode fiber cable, be sure to use single-mode fiber port connectors. Single-mode fiber cable has a smaller diameter than multi-mode fiber cable (9/125 microns for single-mode, 50/125 or 62.5/125 microns for multi-mode where xx/xx are the diameters of the core and the core plus the cladding respectively). Single-mode fiber allows full bandwidth at longer distances, about 70km with the single-mode LC.

3.2.4 Gigabit SFP (Small Form-factor Pluggable) Transceivers

The small form-factor pluggable (SFP) is a compact optical transceiver used in optical communications for both telecommunication and data communications applications. Due to its compact, hot pluggable characteristics, SFPs are becoming a very popular choice for various applications. The small-chassis Magnum 6KL is designed for industry-standard Gb-SFPs for user selection of the SFP gigabit media type as desired.

All SFPs used in Magnum 6KLs are compliant with the industry standard Multi-Source Agreement (MSA) ensuring compatibility with a wide range of networking kit.

(see Section 1.2 for the SFP's available for the 6KL)

Note: It is highly recommended to remove the fiber cable first before removing the SFP transceiver for any reason. Not removing the fiber cable first can damage the fiber cable, cable connector or optical interfaces. It is advised not to remove and insert a SFP transceiver frequently as this may shorten its useful life.

Note: Always use an ESD wrist strap while handling the SFP transceivers since the SFP modules are static sensitive devices.

Note: The copper 1000BASE-T SFP transceiver port supports 1000Mb only. It is recommended to use a straight-through RJ-45(4-twisted pair) connection while connecting to any Server/workstation. While connecting with any Switch/repeater or other device, it is recommended to use Crossover RJ-45 (4-twisted pair) category 5 or higher cabling. The maximum length supported on copper 1000BASE-T is 100m (328 ft.).

3.2.5 Connecting Fiber Optic Cable to SFP Transceivers

1. Before connecting the fiber optic cable, remove the protective dust caps from the tips of the connectors on the PM. Save these dust caps for future use.
2. Wipe clean the ends of the dual connectors with a soft cloth or lint-free lens tissue dampened in alcohol. Make certain the connectors are clean before connecting.

Note: One strand of the duplex fiber optic cable is coded using color bands at regular intervals; you must use the color-coded strand on the associated ports at each end of the fiber optic segment.

3. Find the Transmit (TX) and Receive (RX) markings on the SFP transceiver to verify the top side of it.
4. Position the SFP transceiver correctly before insertion, and then insert the SFP transceiver carefully, until the transceiver connector snap into the place in the socket connector.
5. Connect the Transmit (TX) port on the Magnum PM to the Receive (RX) port of the remote device. Connect the Receive (RX) port on the PM to the Transmit (TX) port of the remote device.

The LINK LED on the front of the PM will illuminate and turn Green, when a proper connection has been established at both ends (and when power is ON in the unit). If LINK is not lit or OFF after cable connection, the normal cause is improper cable polarity. Swap the fiber cables at the PM connector and also check the connectivity on the target device to remedy this situation.

Reconfigure or reboot both of the devices if required.

If connected properly, you can check via (MNS-6K) software for verifying the validity of SFP Gigabit ports.

3.3 DIN-Rail Mounting the Magnum 6KL

The Magnum 6KL is designed for use in a “factory floor” industrial environment. It is available with an optional DIN-Rail bracket to mount it securely in a metal factory floor enclosure, maintained vertically for proper convection cooling of the unit. The Magnum 6KL requires one DIN-Rail bracket for secure mounting. See a 6KL viewed from the bottom, at the rear, showing the DIN Rail in place.

The DIN Rail bracket is mounted to the bottom of the 6KL unit, as shown. Four threaded holes are provided on the bottom of the 6K for DIN-Rail mounting purposes. The required four screws are included with the DIN-Rail bracket, and are no. 4-40 x 9/32 PHIL. PAN Head. The rail clip is spring-loaded with a pull-up latch at the top for easy “snap-on”

attachment and removal.

To install the 6KL with the DIN-Rail bracket installed, hold the 6KL in the side vertical position with the bottom out, and with the top moved in toward the DIN-Rail. Position the DIN bracket over the top of the DIN-Rail. Then, snap the bracket into holding position by moving the bottom of the 6KL inwards to a vertical position. The DIN-Rail bracket is heavy duty, and will hold the 6KL securely in position, even with cabling attached to the unit.

To release the 6KL from the DIN-Rail mounting, push the spring loaded slide down until the unit release from the DIN rail, disengaging the DIN rail bracket from the DIN rail. Once the bottom of the 6KL is rotated out, the DIN-Rail bracket is not engaged and the 6KL can be moved up and out, free of the DIN-Rail mounting.

The DIN-Rail mounting bracket is optional and needs to be ordered as separate items, e.g Model # DIN-RAIL-6KL.

3.3.1 Mounting Dimensions for 6KL with metal brackets

Each Mangum 6KL is supplied with metal mounting brackets and screws to mount the unit securely on a panel or wall. It is recommended to mount the 6KL vertically in one of the two mounting positions available, as shown below, for proper cooling and long-life reliability. It is also advisable to mount the unit with space for air movement around the top and the sides, typically a minimum of 1 inch.

Note: The metal brackets supplied, hold the back of the 6KL unit out from the panel or wall behind it, creating a rear space of about 1/8 inch or 3mm. This allows air circulation and cooling of the rear part of the case.

For best cooling of the 6KL, attach the metal brackets to metal (rather than wood or plastic). Attaching to metal helps conduct heat away from the 6KL through the metal

brackets and into the metal support structure.

Since the 6KL has special internal thermal techniques to move the heat generated by the electronic components inside into the case, the case may be quite warm to the touch during normal operation.

Fig 3.3.1a

Panel / Wall Mounting position 1:

The unit is mounted using the brackets as shown in the illustration above. The spacing for the mounting screws into the supporting wall or panel is a rectangle 4.00 x 8.58 inches (10.20 x 21.79 cm) center-to-center.

Fig 3.3.1b

Panel / Wall Mounting position 2:

The unit is mounted using the brackets as shown in the illustration above. The spacing for the mounting screws into the supporting wall or panel is a rectangle 2.81 x 8.58 inches (7.14 x 21.79 cm) center-to-center.

Fig 3.3.1c Typical Panel / Wall mounting of the 6KL Switch (position 2 shown)

3.4 Powering the Magnum 6KL Managed Edge Switch

The DC internal power supply supports installation environments where the DC voltage is from 10 to 300 volts depending on the model selected. The power consumption will range from about 10 up to 15 watts, depending on the port quantity and types in the configuration.. When connecting the Ethernet cabling, there is no need to power down the unit. Individual cable segments can be connected or disconnected without concern for power-related problems or damage to the unit.

Power input options are available to suit the 6KL Switches to special high-availability communications and/or heavy industrial-grade applications, including:

- * 12VDC, -48VDC, 24VDC, 125VDC and 250VDC with single DC input,
- * 12VDC, -48VDC, 24VDC, 125VDC and 250VDC with dual-source DC input
- * AC input with internal power supply

(see Section 1.2, for Ordering Information)

3.5 Alarm Contacts for monitoring internal power, and Software Traps

The Alarm Contacts feature, standard on Magnum 6KL's, provides two Form C Normally Closed (NC) contacts to which the user can attach two sets of status monitoring wires at the green terminal block.

The first NC Alarm Contact is a "Software Alarm" (labeled S/W), operated by user settings in the MNS-6K software. The user can disable the Software Alarm feature with a software configuration command if desired. When the Software Alarm is enabled, the Form C Normally Closed (NC) contact is held close during normal software operation. A user-defined software malfunction, such as an SNMP Trap or a Software Security violation or an S-Ring Fault, causes the contact to open and thus triggers an alarm in the user's monitoring system

The second NC Alarm Contact is held closed when there is power on the main board inside of the Switch. This provides a "Hardware Alarm" (labeled H/W) because the NC contacts will open when internal power is lost, either from an external power down condition or by the failure of the power supply inside of the Magnum Switch.

Useful info. about Alarm contacts:

1. There are four terminal blocks (1,2,3,4) provided next to the Console port.
2. The left two pins (1,2) are hardware operated
3. The right two pins (3,4) are software operated
4. These are both NC (normally closed) relays
5. The switch's software operation needs to be enabled and set to get the Alarm traps. For detailed information about the Software Alarm and software control of SNMP alarm traps, please reference the Magnum MNS-6K Software User Manual.

The Alarm Contacts are on the front left area (next to the Console port) of the Magnum 6KL unit and are green in color as shown in the picture.

Fig 3.5a Alarm Contacts:
(1,2) are hardware operated
(3,4) are software operated

3.6 Connecting the Console Terminal to Magnum 6KL

Use a (RJ45) “null modem” cable to connect the Magnum 6KL Console Port (the RJ45 Console port on the 6KL Switch) to your PC, so that your PC becomes the 6KL Console Terminal.

Note: The RJ45 cable is not included with the 6KL package.

Note: For a detailed description of Managed Network Software (MNS-6K) and Magnum 6KL Switch configuration for Network Management, please refer to Magnum 6K Software Manual available on GarrettCom’s FTP site.

Also available on GCI website at:

http://www.garrettcom.com/techsupport/sw_downloads.htm

3.6.1 RJ45 Console port (Serial port) pin assignments

RJ45 (6KL Console port connector)

Pin	Signal	Description
1	RTS	Request to Send
2	open	not used
3	TXD	Transmit Data (output)
4	GND	Ground
5	GND	Ground
6	RXD	Receive Data (input)
7	open	not used
8	CTS	Clear to Send

The above provided information enables a managed station (a PC or Console terminal) to connect directly to the switch.

Note: To use the Console port to configure the managed switch, a serial (Null-modem) male to male cable is required to communicate properly. The Null-Modem (RJ45) cable is optional and can be ordered from the factory, along with the unit as-
 CONSOLE-CBLQD for serial port
 CONSOLE-CBLQU for USB port

NOTE for Power Substations: *In support of the IEEE 1613 Class 2 standard, GCI advises that, for substation applications, the serial (RJ45) console ports are intended for temporary connectivity to other equipment such as PCs. Since the console port connection is temporary, it is excluded from IEEE 1613 packet-loss testing per the 1613 standard-defined test procedure.*

4.0 OPERATION

This chapter describes the functions and operation of the Magnum 6KL Switch.

4.1 Switching Functionality

A Magnum 6KL provides switched connectivity at Ethernet wire-speed among all of its ports. The Magnum 6KL supports 10/100Mbps for copper media and 100Mb separate traffic domains for fiber ports to maximize bandwidth utilization and network performance. All ports can communicate to all other ports in a Magnum 6KL, but local traffic on a port will not consume any of the bandwidth on any other port.

The Magnum 6KL units are plug-and-play devices. There is no software configuring necessary to be done for basic operation at installation or for maintenance. There is an optional Half / Full duplex mode and 10Mbps or 100Mbps selection for the switched ports which must be configured through MNS software per unit as per the requirement. The internal functions of both are described below.

Filtering and Forwarding

Each time a packet arrives on one of the switched ports, the decision is taken to either filter or to forward the packet. Packets whose source and destination addresses are on the same port segment will be filtered, constraining them to that one port and relieving the rest of the network from having to process them. A packet whose destination address is on another port segment will be forwarded to the appropriate port, and will not be sent to the other ports where it is not needed. Traffic needed for maintaining the uninterrupted operation of the network (such as occasional multi-cast packets) is forwarded to all ports.

The Magnum 6KL Switches operate in the store-and-forward switching mode, which eliminates bad packets and enables peak performance to be achieved when there is heavy traffic on the network.

Address Learning

All Magnum 6KL units have address table capacities of 8K node addresses suitable for use in larger networks. They are self-learning, so as nodes are added, removed or moved from one segment to another, the 6KL Switch automatically keeps up with node locations.

An address-aging algorithm causes least-used addresses to fall out in favor for frequently-used addresses. To reset the address buffer, cycle power down-and-up.

4.2 Auto-Cross(MDIX) and Auto-negotiation, for RJ-45 ports

The RJ-45 ports independently support auto-cross (MDI or MDIX) in auto-negotiation mode and will work properly with all the other connected devices with RJ-45 ports whether they support Auto-negotiation (e.g 10Mb Hub, media converter) or fixed mode at 10Mb or 100Mb Half/Full Duplex(managed switch) or not. No cross-over cable is required while using the 6KL's copper port to other devices. Operation is according to the IEEE 802.3u standard.

The Managed 6KL's Fast Ethernet copper ports can be set for either fixed 100Mb speed or for 10/100 F/H N-way auto-negotiation per the IEEE802.3u standard. The selection is made via MNS software. The factory default setting is for auto-negotiation. At 10Mb or 100Mb-fixed speed, the user may select half- or full-duplex mode by MNS Software for each RJ-45 port separately. For detail information **See Section 2.3 of this manual for information to access the "6K-MNS Software user guide"**

One frequently-used application for the Managed Magnum 6KL Switch copper ports is to connect one of them using a fiber media converter to another Switch in the network backbone, or to some other remote 100Mb device. In this case, it is desirable to operate the fiber link at 100Mb speed, and at either half- or full duplex mode depending on the capabilities of the remote device. Standard commercially available Fast Ethernet media converters mostly do not support auto-negotiation properly, and require that the switched port to which they are connected be at the 100Mb fixed speed. Attachments to a 10/100 auto-negotiation port typically will not work properly. The 6KL Switch's RJ-45 ports handle this situation by configuring the ports as per desired through MNS software port settings and can check the port status of each port after the change.

When Magnum 6KL RJ-45 copper ports are set for auto-negotiation and are connected to another auto-negotiating device, there are 4 different speed and F/H modes possible depending on what the other device supports. These are: (1) 100Mb full-duplex, (2) 100Mb half-duplex, (3) 10 Mb full-duplex and (4) 10 Mb half-duplex. The auto-negotiation logic will attempt to operate in descending order and will normally arrive at the highest order mode that both devices can support at that time. (Since auto-negotiation is potentially an externally controlled process, the original "highest order mode" result can change at any time depending on network changes that may occur). If the device at the other end is not an auto-negotiating device, the 6KL's RJ-45 ports will try to detect its idle signal to determine 10 or 100 speed, and will default to half-duplex at that speed per the IEEE standard.

General information -

Auto-negotiation per-port for 802.3u-compliant switches occurs when:

- the devices at both ends of the cable are capable of operation at either 10Mb or 100Mb speed and/or in full- or half-duplex mode, and can send/receive auto-negotiation pulses, and . . .
- the second of the two connected devices is powered up*, i.e., when

LINK is established for a port, or

-- the LINK is re-established on a port after being lost temporarily.

- **NOTE** – *Some NIC cards only auto-negotiate when the computer system that they are in is powered. These are exceptions to the “negotiate at LINK – enabled” rule above, but may be occasionally encountered.*

When operating in 100Mb half-duplex mode, cable distances and hop-counts may be limited within that collision domain. The Path Delay Value (PDV) bit-times must account for all devices and cable lengths within that domain. For Magnum 6KL Fast Ethernet switched ports operating at 100Mb half-duplex, the bit time delay is 50BT.

4.3 Flow-control, IEEE 802.3x standard

Magnum 6KL Switches incorporate a flow-control mechanism for Full-Duplex mode. The purpose of flow-control is to reduce the risk of data loss if a long burst of activity causes the switch to save frames until its buffer memory is full. This is most likely to occur when data is moving from a 100Mb port to a 10 Mb port and the 10Mb port is unable to keep up. It can also occur when multiple 100Mb ports are attempting to transmit to one 100Mb port, and in other protracted heavy traffic situations.

Magnum 6KL Switches implement the 802.3x flow control (non-blocking) on Full-Duplex ports, which provides for a “PAUSE” packet to be transmitted to the sender when the packet buffer is nearly filled and there is danger of lost packets. The transmitting device is commanded to stop transmitting into the 6KL Switch port for sufficient time to let the Switch reduce the buffer space used. When the available free-buffer queue increases, the Switch will send a “RESUME” packet to tell the transmitter to start sending the packets. Of course, the transmitting device must also support the 802.3x flow control standard in order to communicate properly during normal operation.

Note: When in Half-Duplex mode, the 6KL Switch implements a back-pressure algorithm on 10/100 Mb ports for flow control. That is, the switch prevents frames from entering the device by forcing a collision indication on the half-duplex ports that are receiving. This temporary “collision” delay allows the available buffer space to improve as the switch catches up with the traffic flow.

4.4 Power Budget Calculations for 6KL Modules with Fiber Media

Receiver Sensitivity and Transmitter Power are the parameters necessary to compute the power budget. To calculate the power budget of different fiber media installations using Magnum products, the following equations should be used:

$$\text{OPB (Optical Power Budget)} = P_T(\text{min}) - P_R(\text{min})$$

where P_T = Transmitter Output Power, and P_R = Receiver Sensitivity

Worst case OPB = OPB - 1dB(for LED aging) - 1dB(for insertion loss)

Worst case distance = {Worst case OPB, in dB} / [Cable Loss, in dB/Km]

where the “Cable Loss” for 62.5/125 and 50/125 μm (M.m) is 2.8 dB/km,

and the “Cable Loss” for 100/140 (Multi-mode) is 3.3 dB/km,

and the “Cable Loss” for 9/125 (Single-mode) is 0.5 dB/km

and the “Cable Loss” for 9/125 (Single-mode) is 0.4 dB/km (LX25)

and the “Cable Loss” for 9/125 (Single-mode) is 0.25 dB/km (ZX40)

and the “Cable Loss” for 9/125 (Single-mode) is 0.2 dB/km (ZX70)

See http://www.garrettcom.com/techsupport/power_budget.pdf for more information on Power budget calculations

5.0 Magnum 6KL Managed Edge Switch Port Modules

This chapter describes each Port Module (PM), including appearance, functionality, and status displays.

5.1 6KL Modules

An important feature of the Magnum 6KL is the use of Port Modules for flexible mixed-media connectivity to RJ-45 copper and various fiber media. The first four ports (1,2,3 & 4) of the Magnum 6KL Switches are fixed RJ-45 copper ports with dual-speed 10/100Mbps auto-negotiating capability. Additionally the switch can accept up to two Port Modules to provide the user with up to 6 additional ports (10 total) providing a wide selection of Ethernet copper and fiber media connections with 10, 100 and 1000Mbps capability and up to 70km.

Note: The 6KL Port modules are not identical to the port modules used in other 6K products such as the 6K25e and 6K16V. For information about other 6K products, please see the applicable manual. For a list of 6KL Port Modules, refer to Section 1.2

Each 6KL Port Module (PM) is individually described in the following sections.

5.1.1 6KL Module LED designations

PWR LED= ON, when Power is being supplied to the unit.

3

RJ45 (Standard)

1= ON (100Mb), OFF (10Mb)

2= ON (Link), BLINKING (Activity)

3= ON (Full Duplex), OFF (Half Duplex)

3

4

RJ45 (PoE)

1= ON (100Mb), OFF (10Mb)

2= ON (Link), BLINKING (Activity)

3= ON (Full Duplex), OFF (Half Duplex)

4= ON (PoE device detected)

Gigabit Port (Copper)

1= ON (10Mb Link), BLINKING (Activity)

2= ON (1000Mb Link), BLINKING (Activity)

1+2= ON (100Mb Link), Blinking (Activity)

5.1.2 6KL4-RJ45, 4 x 10/100Mb RJ45 (Slot C)

The 6KL4-RJ45 4-port Copper module provides four 10/100Mb switched RJ-45 ports. The 10/100Mb switched ports normally (as a default setting) are independently N-way auto-negotiating and auto-crossover (MDIX) for operation at 10 or 100Mb speed in full- or half-duplex mode. (i.e., each independently selects a mode and speed to match the device at the other end of the twisted pair cable).

(for auto-negotiation and MDIX details, see Section 4.2 in the 6KL User Guide).

On the model 6KL4-RJ45 module, there are three LEDs for each port, two integrated into the connector, and one below the connector. The LK/ACT LED indicates LK (Link) “ready for operation” on that port when lit. The ACT (Activity) LED indicates receiving Activity on that port when blinking. The 10/100 LED indicates operation at 100Mb speed when ON and at 10 Mb speed when OFF (when auto-negotiation is not disabled). The F/H LED is ON to indicate full-duplex operation and OFF to indicate the half-duplex mode. A twisted pair cable must be connected into an RJ-45 port and the Link (LK) indicator for that port must be ON (indicating there is a powered-up device at the other end of the cable) in order for a LK LED to provide valid indications of operating conditions on that port.

Using the 6K (MNS-6K or MNS-6K-SECURE) management software, the user may disable auto-negotiation and fix the desired operation of each RJ-45 port. The user may select 10Mb or 100Mb speed and full- or half-duplex mode per-port as per user requirements. (See Magnum MNS-6K Software Manual for additional info)

NOTE: for Power Substations: *In support of the IEEE 1613 Class 2 standard, GCI advises that, for substation applications, the RJ-45 ports are intended for connectivity to other communication equipment such as routers or telecommunication multiplexers installed in close proximity (i.e., less than 2 meters or 6.5ft) to the 6KL. It is not recommended to use these ports in substation applications to interface to field devices across distances which could produce high (greater than 2500V) levels of ground potential rise (GPR) during line-to-ground fault conditions. The 6KL passes the 1613 specifications for zero packet loss with fiber ports and with RJ-45 ports used as indicated here.*

5.1.3 6KL4-4MLC, 4 x Multimode LC (Slot C)

The 6KL4-4MLC 4-port Fiber module provides four 100Mb Multimode LC Fiber ports.

The 6KL4-4MLC fiber ports are Small Form Factor (SFF) LC Multimode connectors used primarily in 100Mbps fiber-to-the-desktop links. When installed in a Magnum 6KL Series Switch, it supports fiber optic cable distances up to the IEEE-standard 100Mbps distance limits, i.e., typically 2km at full-duplex and 412m at half-duplex.

The compact size of the LC Connector reduces the size of wiring panels in wiring closets while providing the advantage of “future-proof” fiber optic technology.

The cable end is a “plug-in” connector with both fiber strands terminated in one housing that cannot be improperly inserted. Each port has a Link/Activity (L/A) LED indicating proper connectivity (Link) with the remote device when lit and blinking (Activity), indicating packets being received.

5.1.4 6KL4-4SLC, 6KL4-4SLCL, 4 x Singlemode LC (Slot C)

The 6KL4-4SLC 4-port Fiber module provides four 100Mb Singlemode LC Fiber ports, supporting distances up to 20km. This module provides the same functions as the Multimode version (see Section 5.1.3 for more details).

The 6KL4-4SLCL 4-port Fiber module provides four 100Mb Singlemode LC (Long Reach) Fiber ports, supporting distances up to 40km. This module provides the same functions as the Multimode version (see Section 5.1.3 for more details).

5.1.5 6KL4-2MLC2RJ, 2 x Multimode LC / 2 x RJ45 (Slot C)

The 6KL4-2MLC2RJ 4-port Fiber / Copper module provides two 100Mb Multimode LC Fiber ports and two 10/100Mb switched RJ-45 ports.

The Multimode LC ports support fiber optic cable distances up to the IEEE standard 100Mbps distance limits, typically 2km at full-duplex.

The 6KL4-2MLC2RJ copper ports support Ethernet twisted pair segments of any standard length. It is equipped with a two-port RJ-45 connector, and offers 10/100 full / half-duplex auto-negotiating capability on each port. The RJ-45 connector is shielded to minimize emissions and will allow both unshielded twisted pair (UTP) and shielded twisted pair (STP) cable connections. When installed in a Magnum 6KL Series Managed Switch, the copper ports support the standard distance of 100m on each port. (see Sections 5.1.2 and 5.1.3 for more details)

5.1.6 6KL4-2SLC2RJ, 6KL4-2SLCL2RJ (Slot C) 2 x Singlemode LC / 2 x RJ45

The 6KL4-2SLC2RJ 4-port Fiber module provides two 100Mb Singlemode LC Fiber ports, supporting distances up to 20km and two 10/100Mb switched RJ45 ports. This module provides the same functions as the Multimode version (see Section 5.1.2 and 5.1.3 for more details).

The 6KL4-2SLCL2RJ 4-port Fiber module provides two 100Mb Singlemode LC Fiber ports, supporting distances up to 40km and two 10/100Mb switched RJ45 ports. This module provides the same functions as the Multimode version (see Section 5.1.2 and 5.1.3 for more details).

5.1.7 6KL4-4MTRJ, 4 x Multimode MTRJ (Slot C)

The 6KL4-4MTRJ 4-port Fiber module provides four 100Mb Multimode MTRJ Fiber ports.

The 6KL4-4MTRJ fiber port is a Small Form Factor (SFF) MTRJ Multimode connector. The MTRJ's small size and ease of connection make it a good choice for 100Mbps "fiber-to-the-desktop" Ethernet connectivity. When installed in a Magnum 6KL Series Switch, it supports fiber optic cable distances up to the IEEE-standard 100Mbps distance limits, i.e., typically 2km at full-duplex and 412m at half-duplex.

The cable end is a "plug-in" connector with both fiber strands terminated in one housing that cannot be improperly inserted. Each port has a Link/Activity (L/A) LED indicating proper connectivity (Link) with the remote device when lit and blinking (Activity), indicating packets being received.

5.1.8 6KL4-2MT2RJ, 2 x Multimode MTRJ / 2 x RJ45 (Slot C)

The 6KL4-2MT2RJ 4-port Fiber / Copper module provides two 100Mb Multimode MTRJ Fiber ports and two 10/100Mb switched RJ-45 ports.

The Multimode MTRJ ports support fiber optic cable distances up to the IEEE standard 100Mbps distance limits, typically 2km at full-duplex.

The 6KL4-2MT2RJ copper ports support Ethernet twisted pair segments of any standard length. It is equipped with a two-port RJ-45 connector, and offers 10/100 full / half-duplex auto-negotiating capability on each port. The RJ-45 connector is shielded to minimize emissions and will allow both unshielded twisted pair (UTP) and shielded twisted pair (STP) cable connections. When installed in a Magnum 6KL Series Managed Switch, the copper ports support the standard distance of 100m on each port. (see Sections 5.1.2 and 5.1.7 for more details)

5.1.9 6KL4-4MSC, -4MST, -4FLST, -2FX2FLMST (Slot C) 4 x SC Multimode or 4 x ST Multimode

The 6KL4-4MSC (shown) 4-port Fiber module provides four 100Mb Multimode SC Fiber ports. This option utilizes a SC-type “push-pull” fiber optic connection.

The 6KL4-4MST 4-port Fiber module provides four 100Mb Multimode ST Fiber ports. This option utilizes a ST-type “twist-lock” fiber optic connection.

The 100Mb Multimode SC and ST ports support fiber optic cable distances up to the IEEE standard 100Mbps distance limits, typically 2km at full-duplex.

The 6KL4-4FLST 4-port Fiber module provides four 10Mb Multimode ST Fiber ports. This option utilizes a ST-type “twist-lock” fiber optic connection. The 10Mb ST-fiber ports allow the user to connect their legacy 10Mb network to the Magnum 6KL Series switch. It supports distances according to the 10Base-FL standard (up to 2km for Multimode fiber)

The 6KL4-2FX2FLMST 4-port Fiber module provides two 100Mb Multimode

ST Fiber ports and two 10Mb Multimode ST Fiber ports. This option utilizes a ST-type “twist-lock” fiber optic connection.

Port 1 is marked “TX” transmit and “RX” receive for clarity. All other fiber ports follow this same configuration. Each port has a Link/Activity (L/A) LED indicating proper connectivity (Link) with the remote device when lit and blinking (Activity), indicating packets being received.

5.1.10 6KL4-4SSC, 6KL4-4SSCL (Slot C) 4 x SC Singlemode

The 6KL4-4SSC 4-port Fiber module provides four 100Mb Singlemode SC Fiber ports, supporting distances up to 20km. This module provides the same functions as the Multimode version (see Section 5.1.9 for more details).

The 6KL4-4SSCL 4-port Fiber module provides four 100Mb Singlemode SC (Long Reach) Fiber ports, supporting distances up to 40km. This module provides the same functions as the Multimode version (see Section 5.1.9 for more details).

5.1.11 6KL4-2MSC2RJ, 6KL4-2MST2RJ (Slot C) 2 x SC Multimode or 2 x ST Multimode / 2 x RJ45

The 6KL4-2MSC2RJ (shown) 4-port Fiber/Copper module provides two 100Mb Multimode SC Fiber ports and two 10/100Mb switched RJ45 ports. This option utilizes a SC-type “push-pull” fiber optic connection.

The 6KL4-2MST2RJ 4-port Fiber/Copper module provides two 100Mb Multimode ST Fiber ports and two 10/100Mb switched RJ45 ports. This option utilizes a ST-type “twist-lock” fiber optic connection.

The 6KL4-2MSx2RJ copper ports support Ethernet twisted pair segments of any standard length. It is equipped with a two-port RJ-45 connector, and offers 10/100 full / half-duplex auto-negotiating capability on each port. The RJ-45 connector is shielded to minimize emissions and will allow both unshielded twisted pair (UTP) and shielded twisted pair (STP) cable connections. When installed in a Magnum 6KL Series Managed Switch, the copper ports support the standard distance of 100m on each port. (see Sections 5.1.2 and 5.1.9 for more details)

5.1.12 6KL4-2SSC2RJ (Slot C) 2 x SC Singlemode / 2 x RJ45

The 6KL4-2SSC2RJ 4-port Fiber/Copper module provides two 100Mb Singlemode SC Fiber ports and two 10/100Mb switched RJ45 ports. This module provides the same functions as the Multimode version (see Section 5.1.11 for more details).

5.1.13 6KL4-2SL2MLC, 6KL4-1SL3MLC (Slot C)

The 6KL4-2SL2MLC 4-port Fiber module provides two 100Mb Singlemode LC Fiber ports and two 100Mb Multimode LC Fiber ports.

The 6KL4-1SL3MLC 4-port Fiber module provides one 100Mb Singlemode LC Fiber port and three 100Mb Multimode LC Fiber ports.

Both modules above are Small Form Factor (SFF) LC connectors in Singlemode and Multimode fiber configurations. The Singlemode connectors supporting distances up to 20Km and Multimode connectors supporting up to 2Km distances.

5.1.14 6KL4-1ML1SLC2RJ (Slot C) 1 x LC Multimode / 1 x LC Singlemode / 2 x RJ45

The 6KL4-1ML1SLC2RJ 4-port Fiber / Copper module provides one 100Mb Multimode LC Fiber port, one Singlemode LC Fiber port and two 10/100Mb switched RJ-45 ports.

The Singlemode connectors support distances up to 20Km and Multimode connectors supporting up to 2Km distances.

The 6KL4-1ML1SLC2RJ copper ports support Ethernet twisted pair segments of any standard length. It is equipped with a two-port RJ-45 connector, and offers 10/100 full / half-duplex auto-negotiating capability on each port. The RJ-45 connector is shielded to minimize emissions and will allow both unshielded twisted pair (UTP) and shielded twisted pair (STP) cable connections. When installed in a Magnum 6KL Series Managed Switch, the copper ports support the standard distance of 100m on each port.

5.1.15 6KL4-1MLC3RJ, 1 x LC Multimode / 3 x RJ45 (Slot C)

The 6KL4-1MLC3RJ 4-port Fiber/Copper module provides one 100Mb Multimode LC Fiber port, supporting distances up to 2km and three 10/100Mb switched RJ45 ports. (see 5.1.2 and 5.1.3 for more details)

**5.1.16 6KL4-1SLC3RJ, 6KL4-1SLCL3RJ (Slot C)
1 x LC Singlemode / 3 x RJ45**

The 6KL4-1SLC3RJ 4-port Fiber/Copper module provides one 100Mb Singlemode LC Fiber port, supporting distances up to 20km and three 10/100Mb switched RJ45 ports.

The 6KL4-1SLCL3RJ 4-port Fiber/Copper module provides one 100Mb Singlemode LC Fiber port, supporting distances up to 40km and three 10/100Mb switched RJ45 ports. (see 5.1.2 and 5.1.3 for more details)

5.1.17 6KL4-1MT3RJ, 1 x MTRJ Multimode / 3 x RJ45 (Slot C)

The 6KL4-1MT3RJ 4-port Fiber/Copper module provides one 100Mb Multimode MTRJ Fiber port, supporting distances up to 2km and three 10/100Mb switched RJ45 ports. (see 5.1.2 and 5.1.7 for more details)

5.1.18 6KL1-1MLC, -1SLC, -1SLCL, 1 x LC (Slot C)

The 6KL1-1MLC 1-port Fiber module provides one 100Mb Multimode LC Fiber port. Supports fiber optic cable distances up to 2Km.

The 6KL1-1SLC 1-port Fiber module provides one 100Mb Singlemode LC Fiber port. Supports fiber optic cable distances up to 20Km.

The 6KL1-1SLCL 1-port Fiber module provides one 100Mb Singlemode LC Fiber port. Supports fiber optic cable distances up to 40Km. (see 5.1.3 for more details)

5.1.19 6KL1-1MT, 1 x MTRJ Multimode (Slot C)

The 6KL1-1MT 1-port Fiber module provides one 100Mb Multimode MTRJ Fiber port. Supports fiber optic cable distances up to 2Km. (see 5.1.7 for more details)

5.1.20 P6KL4-RJ45, 4 x PoE RJ45 (Slot C)

The 6KL is available with the option of having PoE capabilities on the four RJ45 ports in slot C. This is used in conjunction with 6KLP-48VDC to add an additional four PoE ports to the existing four PoE ports in slot A.

The PoE (Power-over-Ethernet) RJ45 ports are similar to regular RJ45 ports, except they have the capability of providing power on each port to power up attached PD devices, per the IEEE802.3af PoE standard. The power-pass-through PoE ports are dependent upon the -48VDC input power to supply the PD power for these RJ45 (10/100) ports. Each port supplies up to 15watts to power attached PoE PD devices.

The LEDs on the PoE ports are slightly different compared to regular (non-PoE) RJ45 ports. When the PoE port is in use, the PoE LED is ON when connected properly to an IEEE 803.af compliant PD device on that port. When non-PoE devices are connected, the PoE LED is OFF. Operation of Ethernet data traffic is not affected by PoE. LINK and ACTIVITY LEDS are combined on the PoE modules into one LED that is marked as L/A.

5.1.21 PP6KL4-RJ45, 4 x PoE+(Plus) RJ45 (Slot C)

The 6KL is available with the option of having PoE+ capabilities on the four RJ45 ports in slot C. This can be used with all -48VDC base units to add four PoE+ ports to the existing four non-PoE or PoE ports in slot A.

The PoE (Power-over-Ethernet) RJ45 ports are similar to regular RJ45 ports, except they have the capability of providing power on each port to power up attached PD devices, per the IEEE802.3at PoE standard. The power-pass-through PoE ports are dependent upon the -48VDC input power to supply the PD power for these RJ45 (10/100) ports. Each port supplies up to 25watts to power attached PoE PD devices.

The LEDs on the PoE ports are slightly different compared to regular (non-PoE) RJ45 ports. When the PoE port is in use, the PoE LED is ON when connected properly to an IEEE 803.af or 802.3at compliant PD device on that port. When non-PoE devices are connected, the PoE LED is OFF. Operation of Ethernet data traffic is not affected by PoE. LINK and ACTIVITY LEDS are combined on the PoE modules into one LED that is marked as L/A.

PoE LEDs Summary

- For PoE devices, each RJ45 PoE port supports 802.3af or 802.3af / 802.3at with PoE plus module installed, complaint devices. The PoE LED is ON when the attached PD is drawing power from the port. The power is supplied on the data pairs, per IEEE802.3af or 802.3at PoE standard.
- For non-PoE devices connected, the PoE port will act as a normal RJ45 port and the PoE LED is OFF. No power is sent out from the port.
- The PoE ports in Magnum 6K's with 48VDC power input act as a pass-through, so the 48VDC power input source to the Magnum 6KL must be strong enough to provide power to the 6K switch and to all 4-RJ45 ports with PD devices connected (up to 15 watts per PoE port for IEEE802.3af or 25 watts per IEEE802.3at).

In the case where the 48VDC power in not internally connected to the POE port pins and no power is coming to the PoE ports for some reason, all the PoE port LEDs are ON simultaneously to indicate a trouble condition. The ports will still operate properly for data traffic to non-PoE devices.

5.1.22 6KL-2GCU, 2 x Gigabit RJ45 (Slot B)

The 6KL-2GCU 2-port Copper Gigabit module provides two fixed 10/100/1000Mb RJ45 ports in slot B.

There are two LEDs provided for each Gigabit port. Each Copper Gigabit port has LEDs that indicate L/A (Link/Activity), 10, 100 and 1000Mbps speed (set to AUTO by default).

5.1.23 6KL-2GSFP, 2 x Gigabit SFP (Slot B)

The 6KL-2GSFP 2-port Fiber Gigabit module provides two SFP open transceiver locations. Transceivers are available with both multi-mode 850nm (550m), 1310nm (2km), single-mode 1310nm (10km and 25km) and single-mode 1550nm (40km and 70km) fiber options. (see Sec. 1.2 of this manual for available part numbers)

The 1000Mb Gigabit SFP fiber-port modules on the Magnum 6KL are normally set (factory default) to operate at AUTO mode for best fiber distance and performance. Each port has a Link/Activity (L/A) LED indicating proper connectivity (Link) with the remote device when lit and blinking (Activity), indicating packets being received.

6.0 TROUBLESHOOTING

All Magnum Ethernet products are designed to provide reliability and consistently high performance in all network environments. The installation of a Magnum 6KL Switch is a straight forward procedure. The operation is also straightforward and is discussed in Section 4.0 of this 6KL User Guide.

Should problems develop during installation or operation, this section is intended to help locate, identify and correct these types of problems. Please follow the suggestions listed below prior to contacting your supplier. However, if you are unsure of the procedures described in this section or if the Magnum 6KL Switch is not performing as expected, do not attempt to repair the unit; instead contact your supplier for assistance or contact GarrettCom Customer Support.

6.1 Before Calling for Assistance

1. If difficulty is encountered when installing or operating the unit, refer back to the Installation Section of the applicable chapter of this manual. Also check to make sure that the various components of the network are interoperable.
2. Check the cables and connectors to ensure that they have been properly connected and the cables/wires have not been crimped or in some way impaired during installation. (About 90% of network downtime can be attributed to wiring and connector problems.)
3. Make sure that power is properly attached to each Magnum 6KL Switch unit. Use the PWR LEDs to verify each unit is receiving power.
4. If the problem is isolated to a network device other than the Magnum 6KL Switch product, it is recommended that the problem device be replaced with a known good device. Verify whether or not the problem is corrected. If not, go to Step 5 below. If the problem is corrected, the Magnum 6KL Switch and its associated cables are functioning properly.
5. If the problem continues after completing Step 4 above, contact your supplier of the Magnum 6KL Switch unit or if unknown, contact GarrettCom, Inc. by fax, phone or email (support@garrettcom.com) for assistance.

6.2 When Calling for Assistance

Please be prepared to provide the following information.

1. A complete description of the problem, including the following points:
 - a. The nature and duration of the problem;
 - b. Situations when the problem occurs;
 - c. The components involved in the problem;
 - d. Any particular application that, when used, appears to create the problem;

2. An accurate list of GarrettCom product model(s) involved, with serial number(s). Include the date(s) that you purchased the products from your supplier.
3. It is useful to include other network equipment models and related hardware, including personal computers, workstations, terminals and printers; plus, the various network media types being used.
4. A record of changes that have been made to your network configuration prior to the occurrence of the problem. Any changes to system administration procedures should all be noted in this record.

6.3 Return Material Authorization (RMA) Procedure

All returns for repair must be accompanied by a Return Material Authorization (RMA) number. To obtain an RMA number, please use this URL - https://rma.garrettcom.com/rma/rma_request_noaccount.php to fill out the form. Please have the following information readily available:

- Name and phone number of your contact person.
- Name of your company / institution
- Your shipping address
- Product name
- Serial Number (or Invoice Number)
- Packing List Number (or Sales Order Number)
- Date of installation
- Failure symptoms, including a full description of the problem.

GarrettCom will carefully test and evaluate all returned products, will repair products that are under warranty at no charge, and will return the warranty-repaired units to the sender with shipping charges prepaid (see Warranty Information, Appendix A, for complete details). However, if the problem or condition causing the return cannot be duplicated by GarrettCom, the unit will be returned as:

No Problem Found.

GarrettCom reserves the right to charge for the testing of non-defective units under warranty. Testing and repair of product that is not under warranty will result in a customer (user) charge.

6.4 Shipping and Packaging Information

Should you need to ship the unit back to GarrettCom, please follow these instructions:

1. Package the unit carefully. It is recommended that you use the original container if available. Units should be wrapped in a "bubble-wrap" plastic sheet or bag for shipping protection. (You may retain all connectors and this Installation Guide.)

CAUTION: Do not pack the unit in Styrofoam "popcorn" type packing material. This material may cause electro-static shock damage to the unit.

2. Clearly mark the Return Material Authorization (RMA) number on the outside of the shipping container.
3. GarrettCom is not responsible for your return shipping charges.
4. Ship the package to:

GarrettCom, Inc.
47823 Westinghouse Dr.
Fremont, CA 94539
Attn.: Customer Service

APPENDIX A: WARRANTY INFORMATION

GarrettCom, Inc. warrants its products to be free from defects in materials and workmanship for a period of three (3) years from the date of shipment by GarrettCom.

During this warranty period, GarrettCom will repair or, at its option, replace components in the products that prove to be defective at no charge other than shipping and handling, provided that the product is returned pre-paid to GarrettCom.

This warranty will not be effective if, in the opinion of GarrettCom, the product has been damaged by misuse, misapplication, or as a result of service or modification other than by GarrettCom.

GarrettCom reserves the right to make a charge for handling and inspecting any product returned for warranty repair which turns out not to be faulty.

APPENDIX B: DC Power Input

B1.0 Specifications for Magnum 6KL Switches, DC Power at 12, 24, -48, 125 and 250VDC Power input

Each Magnum Model 6KL Managed Switch requires DC power input, at 12, 24, 48, 125 and 250VDC nominal. The wide range of DC power input types qualifies this product for use in 12, 24, 48, 125 and 250VDC applications in different industries.

DC Power Terminals: “+”, “-” are internally floating so that user may ground either

GND: ground wire connection to the 6KL chassis (#6-32 thread)

Fig B1.0a Location of chassis ground

Power Consumption:

- 15 watts typical (for a fully loaded fiber model with 2Gb)
- 10 watts typical (for 8 ports, copper and 100Mb fiber)

12VDC Power Input nominal (range 10 to 15VDC)

24VDC Power Input nominal (range 18 to 36VDC)

-48VDC Power Input nominal (range 36 to 60VDC)

125VDC Power Input nominal (range 88 to 150VDC)

250VDC Power Input nominal (range 160 to 300VDC)

Standard 6KL DC Power Input Terminal Block : “ -, GND, + ”

See also Section 1.0, Technical Specifications, for the 6KL base unit

B2.0 12, 24, -48, 125 and 250VDC POWER, THEORY OF OPERATION

The 12, 24, -48VDC, 125 and 250VDC power options are designed using diodes inside on each DC power input line behind the two external power connection terminals, so that the power from an external source can only flow into the hub. This allows the Switch to operate only whenever DC power is

correctly applied to the two inputs. It protects the Switch from incorrect DC input connections. An incorrect polarity connection, for example, will neither affect the Switch, its internal power supply, nor will it blow the fuse in the internal power supply.

B3.0 APPLICATIONS FOR DC POWERED ETHERNET SWITCHES

Magnum 6KL Switches are easily installed in a variety of applications where 12, 24, -48VDC, 125 and 250VDC power is used as the primary power source. The DC power configuration capability provides an Ethernet networking solution utilizing a special power supply in switches with a proven track record.

The -48VDC solution is particularly useful in the telecommunication industry, where it is common for facilities to operate on -48VDC power. Such companies include regular and wireless telephone service providers, Internet Service Providers (ISPs) and other communication companies. In addition, many high availability equipment services, such as broadcasters, publishers, newspaper operations, brokerage firms and other facilities often use a battery backup system to maintain operations in the event of a power failure. It is also frequently used for computer system backup, management and operations monitoring equipment.

The 24V and 125VDC options are particularly useful in the industrial environment, where it is common for facilities to operate on 24VDC or 125VDC power. The 125VDC options are mainly used in power utilities, such as electrical substations, electrical generating plants, etc. The 24VDC applications are mainly in heavy duty industrial automation such as factory floor, process plants, HVAC, military equipment, etc.

B4.0 6KL, 12, 24, -48, 125 and 250VDC INSTALLATION

This section describes the proper connection of the leads to the DC power terminal block on the Magnum 6KL Switch. The DC terminal block on the Magnum 6KL Managed Switch is located on the left front of the unit and is equipped with four (4) screw-down lead posts. The power terminals are identified as positive (+) and negative (-), and they are electrically floating inside the unit so that either may be grounded by the user if desired. The chassis is "earth" or ground (GND).

The connection procedure is straightforward. Simply insert the DC leads to the Switch's power terminals, positive (+) and negative (-) screws. The use of Ground (GND) connects to the Switch chassis screw provided under the DC terminal. Ensure that each lead is securely tightened.

NOTE: Always use a voltmeter to measure the voltage of the incoming power supply and figure out the +ve potential lead or -ve potential lead. The more +ve potential lead will connect to the post labeled “+ve” and the rest to the “-ve”. The GND can be hooked up at the last.

When power is applied, the green PWR LED will illuminate.

Note: The GND should be hooked up first. The 6KL unit has a floating ground, so the user may elect to Ground either + or - terminal to suit the customer’s use.

Before connecting live power lines to the Terminal Block of –48VDC, 12VDC, 24VDC, 125VDC or 250VDC products, always use a digital voltmeter to measure the output voltage of the power supply and determine the lead which is more “+ve potential”. The more “+ve” voltage lead from 48V or –48V supply must be connected to the post labeled “+”.

B4.1 UL Requirements for DC-powered units

CAUTION: 48VDC products shall be installed with a readily accessible disconnect device in the building installation supply circuit to the product.

Minimum 18AWG cable for connection to a Centralized DC power source.

- 1. Minimum 14AWG cable for connection to an earth wiring.*
- 2. Use only with Listed 10A circuit breaker provided in building installation.*
- 3. “Complies with FDA radiation performance standards, 21 CFR subchapter J.” or equivalent.*
- 4. Fastening torque of the lugs on the terminal block: 9 inch-pound max.*
- 5. To secure a centralized DC Power Source cable, use at least four cable ties to secure the cable to the rack at least 4 inches apart, with the first one located within 6 inches of the terminal block.*

B5.0 OPERATION

Operation of Magnum 6KL Switches with the optional -48VDC, 12VDC, 24VDC, 125VDC or 250VDC dual-source power input is identical to that of the standard single-source DC-powered models.

B6.0 TROUBLESHOOTING

Please refer to Section 6.0 for troubleshooting

APPENDIX C: Internal DC Dual-Source Power Input Option**C1.0 SPECIFICATIONS - FOR MAGNUM 6KL EDGE SWITCH****Power Supply (Internal, -48VDC Dual-Source)**

DC Power Connector: First Source: “A+”, “A-“, 2nd Source “B-“, “B+”

GND: ground wire connection to the hub chassis screw

Input: Two separate sources, each at 36 - 60 VDC

Power Supply (Internal, 12VDC Dual-Source, model # Dual-Src-12V)

DC Power Connector: First Source: “A+”, “A-“, 2nd Source “B-“, “B+”

GND: ground wire connection to the hub chassis screw

Input: Two separate sources, each at 10-15 VDC

Power Supply (Internal, 24VDC Dual-Source, model # Dual-Src-24V)

DC Power Connector: First Source: “A+”, “A-“, 2nd Source “B-“, “B+”

GND: ground wire connection to the hub chassis screw

Input: Two separate sources, each at 18 - 36 VDC

Power Supply (Internal, 125VDC Dual-Source, model # Dual-Src-125V)

DC Power Connector: First Source: “A+”, “A-“, 2nd Source “B-“, “B+”

GND: ground wire connection to the hub chassis screw

Input: Two separate sources, each at 88 - 150 VDC

Power Supply (Internal, 250VDC Dual-Source, model # Dual-Src-250V)

DC Power Connector: First Source: “A+”, “A-“, 2nd Source “B-“, “B+”

GND: ground wire connection to the hub chassis screw

Input: Two separate sources, each at 160 - 300 VDC

With the exception of the dual DC input power connections and the power supply, all specifications and configuration options for the Magnum 6KL -48VDC, 12VDC, 24VDC, 125VDC and 250VDC models with this Dual-Source option are identical to those listed in the *Magnum 6KL Edge Switches Installation and User Guide*, including Appendix B “Internal DC Power Supply Option”

C2.0 MAGNUM 6KL, with DC Dual-Source option

The 6KL-Switch models with the internal -48VDC, 12VDC, 24VDC, 125VDC and 250VDC Dual-Source power supply are designed for installations where a battery plant is the power source, and where two separate power sources are utilized in order to increase operational uptime and to simplify maintenance.

The functionality of the Magnum 6KL Switch -48VDC, 12VDC, 24VDC, 125VDC and 250VDC Dual-Source Option units are identical to the AC-powered models. Refer to the main sections of this *Installation and User Guide* for a detailed description of the Magnum 6KL Switches.

C3.0 DUAL-SOURCE OPTION, THEORY OF OPERATION

The Dual-Source DC power option is designed using diodes inside of the chassis on each DC power input line. A diode is placed in each of the four input lines (behind the four external power connection terminals) so that power from an external source can only flow into the unit. This allows the unit to operate whenever DC power is correctly applied to either or both of the two inputs.

C4.0 FEATURES AND BENEFITS OF THE DUAL-SOURCE DESIGN

- The Switch unit can receive power from either input, “A” or “B”. The hub will normally draw its power from the DC source with the highest voltage at a given time.
- The Switch unit will not allow power to flow from a higher voltage input to a lower voltage input, i.e. the two DC power sources are not mixed together by the hub.
- When one correct DC input is present, the Switch will receive power if the other DC input is absent, or even if it is connected with reverse polarity or shorted or grounded.
- Reverse polarity connections, if they should accidentally occur on either input, will not damage the Switch or power supply internally (nor will it blow the fuse in the internal power supply) because of the blocking action of the diodes. This is true even if one input connection is reversed while the Switch is operating from the other source.
- The Switch will not receive power (and will not work) when both inputs are simultaneously absent or are both incorrectly connected.

Figure C5.0a: DC Dual-Source, wiring connections with Dual-Source option.

Dual Source Terminal block →

C5.0 INSTALLATION

This section describes the proper connection of the -48VDC, 12VDC, 24VDC, 125VDC and 250VDC dual source leads to the power terminal block on the Magnum 6KL Switch (shown in Figure above)

The terminal block is located on the left front of the unit next to the Alarm terminal block and is equipped with four (4) screw-down lead posts. The primary terminals are identified as positive (A+),

negative (A-), and the secondary power terminals as negative (B-), positive (B+). The chassis is earth/ground (GND).

Note: The GND should be hooked up first. The 6KL unit has a floating ground, so the user may elect to Ground either + or - terminal to suit the customer's use. Before connecting live power lines to the terminal block, always use a digital voltmeter to measure the output voltage of the power supply and determine the lead which is more "+ve potential". The more "+ve" voltage lead from a +ve or -ve power supply must be connected to the post labeled "+".

The connection procedure is straightforward. Simply connect the DC leads to the Switch's power terminals, positive (+) and negative (-) screws. The use of Ground (GND) is optional; it connects to the Switch chassis. Ensure that each lead is securely tightened.

C6.0 ORDERING INFORMATION FOR DUAL SOURCE POWER

To order the optional Dual-Source power supply factory installed, add "Dual-Src-xxxV" as a separate line item following the product model.

Example: **Magnum 6KL-48VDC**
Dual-Src-48V

See the Configuration Guide on the GCI web site at http://www.garrettcom.com/techsupport/insertion_guides/6KLcg.pdf for additional information.
